components

### **Important notes**

Without exception, all current safety regulations and guidelines must be observed in those countries where our products are used.

The photos shown in this brochure feature construction sites in progress. For this reason, safety and anchor details in particular cannot always be considered as conclusive or final. These are subject to the risk assessment carried out by the contractor.

In addition, computer graphics are used which are to be understood as system representations. For ensuring a better understanding, these and the detailed illustrations shown have been partially

reduced to certain aspects. The safety installations which have possibly not been shown in these detailed descriptions must nevertheless be available. The systems or items shown might not be available in every country.

Safety instructions and load specifications are to be strictly observed at all times. Modifications and deviations require a separate static proof.

The information contained herein is subject to technical changes in the interests of progress. Errors and typographical mistakes reserved.

## RUNDFLEX

The continuous and quickly adjustable circular wall formwork for radii with diameters greater than 1.00 m

**The RUNDFLEX Circular Wall Formwork provides pre-assembled standard panels for circular walls which can be quickly adjusted without any complicated panel modifications in order to achieve the required radius. Therefore, the circular formwork is particularly effective for realizing structures such as wastewater treatment plants, spiral ramps for multi-storey parking facilities, silos or oriels where radii are constantly changing.**

This results in low utilization rates per formwork element and radius. In order to be able to efficiently form these

structures, formwork elements must be quickly and flexibly adjusted to suit different radii. RUNDFLEX solves this problem with standard elements and fast radii adjustment. Material costs and time requirements can be significantly reduced with RUNDFLEX – even for radii of 1.00 m.

With a permissible fresh concrete pressure of 60 kN/m<sup>2</sup>, RUNDFLEX also allows high concreting speeds.

### Low installation effort

through pre-assembled units and the proven BFD Alignment Coupler

### Fast and precise adjustment

through a simple adjustment procedure by means of a template and spindles

### Extremely variable

through the flexible adjustment of wall internal radii of 1.00 m and larger – also for complicated geometries

## Low installation effort

Fast forming operations through pre-assembled standard elements and the proven BFD Alignment Coupler

**RUNDFLEX elements are pre-assembled at the assembly hall and are available in 3 different panel widths and 6 panel heights.**

In order to reduce transportation space to a minimum, elements are bundled together in a straight form and then adjusted on the construction site to suit the required radius.

**Element connections and required compensations up to 10 cm are carried out quickly and simply with the BFD Alignment Coupler.**

When connecting the elements, ensure that the elements (external and internal) are aligned on their axis.

For the use of filler timbers up to a maximum of 10 cm between the external and internal elements, corresponding tables are available. For smaller radii, filler timbers are to be cut to a suitable trapezoidal shape.

The alignment coupler can also be used for connecting RUNDLEX with the elements of other formwork systems (e.g. with TRIO).

For connecting the elements, the BFD Alignment Coupler ensures flush, aligned and tight panel connections.

The BFD Alignment Coupler connects the panels; the Adjusting Spindle is only required when the element units are moved.

**Elements for radii  $\geq 4.00$  m**

Plywood: 21 mm

**External elements**

**Internal elements**

**Elements for radii  $\geq 2.50$  m**

Plywood: 18 mm

**Elements for radii  $\geq 1.00$  m**

Plywood: 2 x 9 mm

## Fast and precise adjustment

Simple setting of the radii with adjustable spindles and templates

**The pre-assembled RUNDFLEX elements can be quickly adapted to changes in the radii with a minimum of effort.**

By means of the self-cleaning Adjusting Spindles, the formwork is easily adjusted to fit the required curvature using a Ratchet Spanner and template. PERI delivers the ready-to-use customized radii templates to the construction site. Complicated geometries with constantly changing radii are also quickly and easily formed in this way using RUNDFLEX.

In the process, the adjustable spindles are installed so that the yellow chromated parts are always facing the same direction. Through the same turning direction in each case, the adjusting procedure is uncomplicated and fast.

Checking the required curvatures is carried out by placing the radius template on the formwork girders.

**How it's done**

Radii adjustment basically begins with the spindles in the middle of the element and then work outwards in a uniform sequence.

The "combi" Ratchet Spanner for quick adjustment of RUNDIFLEX elements.

The adjustable spindle for adjusting the edge profile is also operated by means of the "combi" Ratchet Spanner.

## Extremely variable

Flexible adjustment of wall internal radii of 1.00 m and larger – also for complicated geometries

**RUNDFLEX is an enormously versatile and adaptable circular wall formwork. The system provides a solution for virtually any challenge in connection with curvatures, changing radii, roundings and arches.**

Through the possible combination of RUNDFLEX with other formwork systems, complicated ground plans can also be cost-effectively realized. Using the BFD Alignment Coupler, RUNDFLEX elements can be effortlessly combined with TRIO Panel Formwork.

**For applications such as tunnel portals or other arched forms, RUNDFLEX can also be used horizontally.**

Elliptically-shaped tunnel portal with RUNDFLEX elements and accessories from the VARIO programme. The problem of constantly changing radii and inclination was solved by means of conically-cut filler timbers.

## RUNDFLEX at a glance

T-Junctions

Straight wall connection

**A well-rounded success**

RUNDFLEX provides a fast solution in the system for all standard applications. The right accessories are available for height extensions and stopend formwork as well as wall connections. Last but not least, the portfolio includes system supplements for realizing safe working and concreting platforms on the formwork.

## Height extensions, working and concreting platform, guidelines for constructing a radius template

### Height extensions

**RUND FLEX elements can be extended in 60 cm increments.**

RUND FLEX elements can be extended horizontally up to a length of 7.80 m and then erected as one unit. For extending in a vertical position as well as transporting vertically, higher units are also possible.

Horizontal extensions take place in a straight line; one extension splice is to be mounted per girder joint.

## Working and Concreting Platform

**For the installation of safe working and concreting scaffold, RUNDFLEX provides all required system components.**

The scaffold bracket can be mounted at each nodal point of the Lattice Girder GT 24. Platform lining, side and rear protection are supplemented in accordance with respective national regulations.

Assembly of components takes place on a horizontally-positioned element. In addition, an access ladder can be mounted to the first and last element of a set of formwork.

## Guidelines for constructing a radius template

### For the external formwork

Radius = concrete radius + 26.5 cm  
(for 21 mm plywood thickness and 4 mm formlining strip on GT 24 girders).

Radius template for elements  
A 250 outside / I 240 inside,  
A 128 outside / I 123 inside

$$R_a = \text{concrete radius} + 26.5 \text{ cm}$$

### For the internal formwork

Radius = concrete radius - 26.5 cm  
(for 21 mm plywood thickness and 4 mm formlining strip on GT 24 girders).

Radius template for  
A 85/172

$$R_i = \text{concrete radius} - 26.5 \text{ cm}$$

# Push-pull props, stopend formwork, T-junctions, straight wall connections

## Push-pull props

**RUNDFLEX elements are supported with push-pull props and kickers.**

Girder headpieces allow push-pull props and kickers to be fixed on Lattice Girders GT 24 as well as in the area of the extension splices. Push-pull props and kickers are mounted by means of pins and cotter pins.

Push-pull props are also mounted on horizontally-positioned elements.

## Stopend formwork

**Stopend formwork can be realized with and without continuous reinforcement.**

TRIO Stopend Panels – with and without water bar installation – are suitable for the stopend formwork of RUNDFLEX elements. Alternatively, stopend formwork complete with steel walers is provided by the contractor, or SRS Circular Columns can also be used as stopend formwork.

Stopend formwork for RUNDFLEX with the TRIO Stopend Panel and continuous reinforcement.

Stopend formwork for RUNDFLEX with the TRIO Stopend Panel without continuous reinforcement.

## Connecting panel formwork

**The edge profile of the RUNDFLEX element allows PERI panel formwork to be connected to the circular formwork by means of BFD-suitable profiles.**

In this way, the transition to straight wall sections can be quickly and easily realized. Depending on the radius, the use of filler timbers may be required.

Straight outgoing walls can also be easily realized. For normal wall thicknesses, a 90 cm wide frame panel is used for this purpose on the outer side of the formwork; on the inner side, two articulated corners or two internal corners are connected.

## RUNDFLEX in use

### MAC Museum, Singen, Germany

With the Museum Art & Cars (MAC), the town of Singen in Baden-Württemberg has a unique and unmistakable museum building. In the style of the nearby Hohentwiel fortress, the

walls and roof landscape of the structure are repeatedly curved. In addition to the range of specific architectural requirements, high demands were placed on the static through the earthquake-resistant design of the museum. For the complex shapes, RUNDFLEX

proved itself to be the optimal solution. With the easily adaptable formwork system, the various merging radii were continuously and quickly realized without any problems.

## RUNDFLEX in use

Text-book execution: the in-situ concrete curvatures feature variable radii.

Exceptional challenge in housing construction: reinforced concrete walls with constantly changing radii and offset residential floors.

### Secondary School, Bochum, Germany

The new secondary school in Bochum, with approx. dimensions of 125 m x 70 m, required a tight schedule with a construction period of only seven months. The three-storey complex consists of two interlocking, ring-shaped structures. In the process, the radii of the two rings continuously change.

For forming the multiple curved shape of the structure, the continuous adjustment option of the RUNDFLEX elements proved to be enormously time saving. The fact that the TRIO Panel Formwork could be easily and simply connected for the straight wall sections, also accelerated formworking operations.

### Single-family house, Tuttlingen, Germany

The basement and residential floors of this single-family house consist almost entirely of circular-shaped walls with constantly changing radii and offset living areas. Just the 2.75 m high basement walls alone feature ten different radii and were formed with RUNDFLEX and TRIO in seven cycles.

The RUNDFLEX elements could be accurately and quickly adjusted on the construction site for the next cycle. At the same time, element connections with the BFD Alignment Coupler system allowed timber compensations up to 10 cm thick as well as the combination with the TRIO Panel Formwork.

RUNDFLEX also for architectural concrete: depending on requirements, the very best surface qualities can also be achieved with the circular formwork.

RUNDFLEX in use for the shaft of a pump station with a diameter of 25 m.

### **Arena Stage, Washington, USA**

The refurbishment and expansion of the Arena Stage Theater includes, among other things, an elliptically-shaped structure whose walls feature 4° inclinations and reach a height of 23 m. Furthermore, very high architectural concrete requirements were placed on the surfaces of these walls.

RUNDFLEX formwork was used which included high-grade formlining. For the higher-positioned areas, the construction team combined the wall formwork with the CB 240 Climbing System. The units were climbed from concreting cycle to cycle by crane.

### **Pump Station, Preston, England**

As part of a major project for improving the sewage system in Preston, a central pumping station was built in Penwortham which, after it was completed, directs rain water among other things to the wastewater treatment plant in Clifton Marsh.

The excavated shaft for the station has a diameter of over 25 m and a depth of 36 m. For the shaft mantle and dividing walls, 5,000 m<sup>2</sup> of heavily reinforced concrete was used. The formwork solution for the mantle of the shaft consisted of a combination of RUNDFLEX and TRIO elements.

103800	271.000

**Push-Pull Prop RS 1400, galv.**  
Extension length l = 6.40 – 14.00 m.  
For aligning PERI formwork systems.

**Note**  
Permissible load see PERI Design Tables.  
Chain can be operated from bottom.

117343	3.250

--------	-------

**Kicker AV 140**  
Extension length l = 1.08 – 1.40 m.  
For aligning PERI formwork systems.

**Complete with**  
1 pc. 027170 Pin Ø 16 x 42, galv.  
1 pc. 018060 Cotter Pin 4/1, galv.  
**Note**  
Permissible load see PERI Design Tables.

Item no.	Weight kg
108135	12.900

## Kicker AV 210

Extension length  $l = 1.28 - 2.10$  m.  
For aligning PERI formwork systems.

## Complete with

1 pc. 027170 Pin  $\varnothing 16 \times 42$ , galv.  
1 pc. 018060 Cotter Pin 4/1, galv.

## Note

Permissible load see PERI Design Tables.

028120	17.000
--------	--------

## Kicker AV RSS III

Extension length  $l = 2.03 - 2.92$  m.  
For aligning PERI formwork systems.

## Complete with

1 pc. 027170 Pin  $\varnothing 16 \times 42$ , galv.  
1 pc. 018060 Cotter Pin 4/1, galv.

## Note

Permissible load see PERI Design Tables.

124777	0.210
--------	-------

## Anchor Bolt PERI 14/20 x 130

For temporary fixation to reinforced concrete structures.

## Note

See PERI data sheet!  
Drilling  $\varnothing 14$  mm.
